

CJC-1295 / Ipamorelin Blend Chart (Printable PDF)

ANSWER

A pre-blended CJC-1295 and Ipamorelin vial has one shared diluent volume, so both component concentrations change together. This chart shows component mass divided by the same example volumes. It does not select a blend ratio, amount or schedule.

This chart is a calculation reference. The amounts shown are labels or arithmetic examples; this chart states no dose and gives no **medical advice**.

Component label mass × shared diluent → component concentrations

Each row is a direct conversion. No row is highlighted or selected for the reader.

Label components	Diluent entry	CJC concentration	Ipamorelin concentration
5 mg + 5 mg	1 mL	5000 mcg/mL	5000 mcg/mL
5 mg + 5 mg	2 mL	2500 mcg/mL	2500 mcg/mL
5 mg + 5 mg	3 mL	1666.666666666667 mcg/mL	1666.666666666667 mcg/mL
5 mg + 5 mg	5 mL	1000 mcg/mL	1000 mcg/mL

Sources

NIST Guide for the Use of the International System of Units (<https://www.nist.gov/pml/special-publication-811>)

PubMed literature search for CJC-1295 ipamorelin (<https://pubmed.ncbi.nlm.nih.gov/?term=CJC-1295%20ipamorelin>)

KEY FACTS

- ✓ **Arithmetic reference only:** every numeric cell is a unit conversion or mass ÷ volume result.

- ✓ **No amount is selected:** any target amount shown is explicitly a user-entered example axis.
- ✓ **Printable:** the HTML table and downloadable PDF are generated from the same source.
- ✓ **Check the label:** a table cannot authenticate a vial, syringe or diluent.

How to read this chart

Use a value printed on your own label or measuring device, then follow the row to the converted unit. The table performs deterministic arithmetic and does not decide which row applies to you.

What this chart does not do

It does not select an amount, product, diluent volume, schedule or progression. It is a printable reference for values that already exist in your own record.

Source and method

The table was generated from the stated formula and checked against **NIST Guide for the Use of the International System of Units** · PubMed literature search for CJC-1295 ipamorelin. External sources provide unit or identity context; the numeric grid itself is original arithmetic.

Frequently asked questions

Does this printable chart recommend a dose?

^

No. It converts labelled mass, measured volume and user-entered values. It provides no starting amount, upper limit, schedule or progression.

Can I use the PDF without the website?

Why is the source list separate from the numeric table?
